

# OSCAR NOWAK

Since I can remember I've been interested in creating something. My main childhood activity of making Lego's constructions and proudly presenting them to my family started the snowball effect that resulted in graduating in Architecture with a passion for design, entrepreneurship and management.

I now consider myself to be a versatile multidisciplinary designer (*check out my portfolio below!*). I have learnt to combine branches of design to find effective solutions that add value. Utilising industry-standard software I love to bring my conceptual ideas to life. I am eager to apply my knowledge and skills to new and exciting projects and to continue my professional development.

Even though I consider myself a dedicated worker, I also strongly believe in maintaining a balance between work and social life, and making sure to prioritize my well-being.
